

Office space optimization.

Powerful, simple and reliable.

HOW DOES IT WORK?

iKnos Corporate monitors space utilization to **right-size** your portfolio, **improve employee experience** and manage real time building operations.

iKnos is a Cloud-based, SaaS solution that can be managed entirely remotely. Most solutions on the market measure your workplace occupancy with physical sensors. iKnos uses your Wi-Fi infrastructure (we are hardware-agnostic), already deployed in your buildings.

This means there's **no need for new installations**, our solution is **no capex** and has an **immediate set-up!**

**FAST AND
EFFORTLESS**

SMART DECISIONS

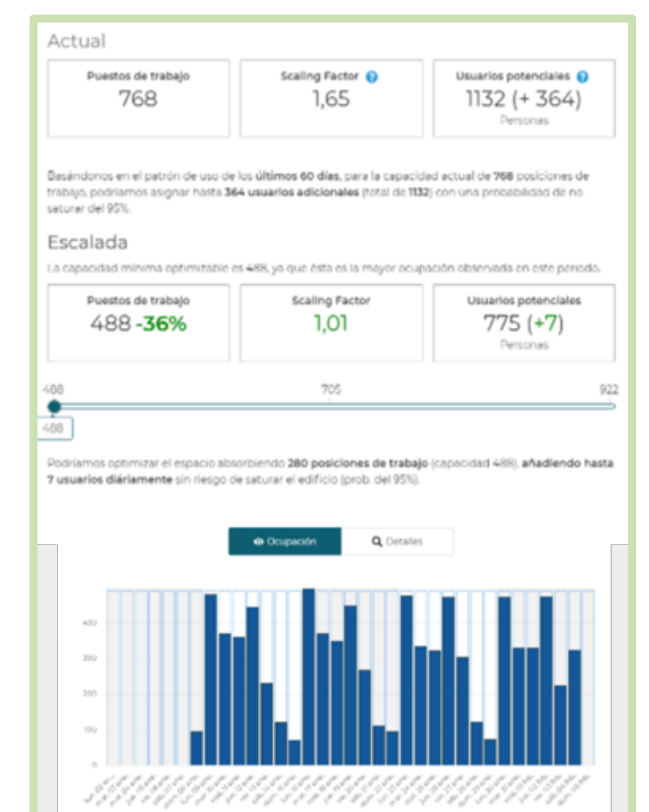

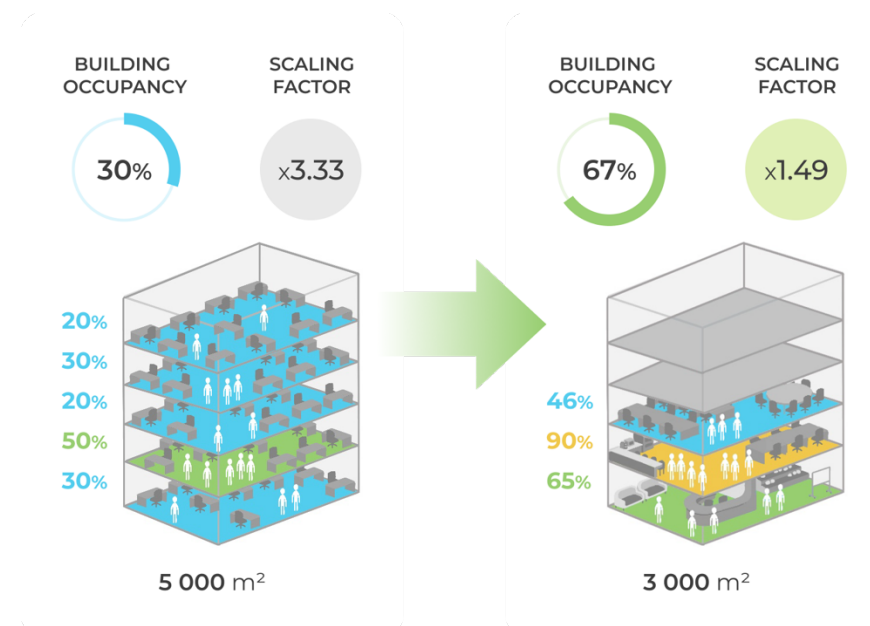

Manage your space smartly with **iKnos Corporate**. Knowing the **real use given to your spaces** will allow you to make safe decisions about their management and operation, optimizing services such as:

- BOOKING:** Booking of spaces (presence validation).
- DINING ROOM:** Real time occupancy (e.g., the dining room, reporting occupancy in real time and predicting future minutes).
- FACILITIES:** Cleaning and Maintenance (dynamic planning based on usage)
- ENERGY:** Energy saving and efficiency (enabling or closing spaces according to the expected usage pattern).

RIGHT SIZE YOUR PORTFOLIO

Our **Scaling Factor (SF)** insight, define the optimal space dimension **guaranteeing the best employee experience**. Training our Machine Learning platform with the usage patterns of each single occupant, we simulate optimized scenarios:

- Setting the **expected density**, area (m²) per person to ensure an ideal user experience.
- Measuring **average and peak** occupancy for each area
- Anonymously analyzing **users' behaviors** (when they enter and the time they spend in each area).
- Simulating the future occupancy for **multiple scenarios** from the behavior pattern of the observed users

DASHBOARD WEB AVAILABLE

Start today to understand **how, how much and when** your spaces are being used.

iKnos Corporate is simple, fast and powerful without being invasive or requiring costly installations.
